

HAREKRISHNA SHAH

Data Analyst | SQL, Data Modelling, BI & Reconciliation

Limerick, Ireland | +353 89 952 1873 | harekrishnashah13@gmail.com | linkedin.com/in/hshah13

Stamp 1G | Full-time right to work in Ireland

PROFILE

Data analyst with 4+ years turning finance, banking and operational data into reporting people trust. My strongest work sits where the numbers have to reconcile: I validated a 1.2PB warehouse migration field by field, reconcile card transaction data daily at AIB, and automate the manual steps that make reports slow and inconsistent. Hands-on with SQL, Python, Power BI, Tableau, Azure and Databricks, and I use AI-assisted tools day to day for SQL drafting, testing and documentation.

EXPERIENCE

Customer Operations Specialist, Covalen (client: Allied Irish Banks), Limerick Aug 2025 – Present

Data-focused operations role on AIB's digital banking platforms: transaction reconciliation, SQL analysis and Power BI reporting.

- Reconcile high-volume card and transaction data daily across AIB's core banking platforms (Mainframe, Arcot, Visa Access Online), tracing each discrepancy to its origin; zero AML/KYC breaches.
- Automated the twice-weekly product report used by senior stakeholders, replacing manual Salesforce-to-Excel preparation with a Python and Microsoft BI workflow; cut preparation from about 4 hours to 15 minutes (roughly 390 hours a year) and kept validation checks for the audit trail.
- Investigate 20+ incidents a day with SQL, finding root causes across systems and escalating evidence-backed findings to engineering.
- Profile records across upstream systems to catch gaps and inconsistencies, adding validation checks so reports carry actionable, trustworthy figures.

Data Analyst, Itelligence Infotech, India (remote from Sep 2023) Dec 2022 – Dec 2024

- Delivered an end-to-end 1.2PB migration from Teradata to Azure Synapse (Databricks, PySpark, Azure Data Factory), building automated field-level reconciliation that proved each table matched the Teradata original before a zero-downtime cutover.
- Developed, tested and maintained pipelines and transformation workflows, with quality checks built into every release.
- Ran requirements workshops with Fortune 500 finance, HR and operations stakeholders, challenging conflicting requests with evidence and translating agreed needs into datasets and dashboards.
- Designed Power BI and Tableau dashboards for finance and operations leadership; applied Random Forest and regression models to large financial datasets.
- Owned UAT across three concurrent client projects: no release went live until outputs reconciled, and none had a critical post-launch failure.
- Mentored three junior analysts through pairing and peer review of their SQL and pipeline work.

Software Developer & Technical Support QA, HiCounselor, India Aug 2022 – Dec 2022

- Created automated Selenium test suites in Jenkins CI/CD and worked through defects with engineers in Agile sprints.

Business Data Analyst, Equitas Small Finance Bank, India Sep 2021 – Aug 2022

- Wrote PostgreSQL queries to audit and reconcile transaction records after system integrations against quality and security standards.
- Tracked financial KPIs and account metrics in SQL and Excel, producing management reports for sales, marketing and operations.

PROJECTS

Graph Analytics Data Pipeline (MSc coursework), dbt, SQL, Neo4j 2024

- Wrote dbt models to clean and structure source data before loading it into Neo4j for graph analysis.

EDUCATION

Master of Science in Data Analytics (NFQ Level 9), Dublin Business School 2024

Bachelor of Technology in Computer Science & Engineering (Data Science specialisation), SRM University, India 2022

SKILLS & CERTIFICATIONS

SQL & Modelling: Advanced SQL (CTEs, window functions), dbt, data modelling, medallion architecture, data quality and reconciliation testing

Platforms: Azure (Synapse, Databricks, Data Factory), Salesforce, PySpark, Delta Lake optimisation (Databricks certified), Teradata, PostgreSQL, Google Cloud, Git

BI & Analysis: Power BI, Tableau, Excel, Python (Pandas, NumPy, Scikit-learn), statistics

AI-assisted analytics: Generative AI tools for SQL drafting, code review, testing and documentation

Domain: Finance, banking, payments, AML/KYC, GDPR

Certifications: Databricks Certified Data Engineer Professional (2026); Google Cloud Gen AI Academy (2026)
